DETAILED ACTION

Specification

1. The objection is maintained as stated in paragraph 5 of the Office Action mailed on 11/6/02. Furthermore, silicon cannot perform the function of the gate dielectric because silicon is a semiconductor and not a gate dielectric.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 1-20 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for the process of claim 1 and further including that the standard-k dielectric material is one of the materials recited in claim 2 and the high-k dielectric is one of those recited in claim 6, does not reasonably provide enablement for recitation of "high-k dielectric material" and "standard-k dielectric material" broadly. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make the invention commensurate in scope with these claims. Chemical reactivity is a most unpredictable and empirical art and it is well settled that the requirement that the claims be commensurate in scope with the enabling disclosure is particularly stringent in this area of technology. In re Doumani 126 USPQ 408, In re Grant 134 USPQ 248, In re Fisher 166 USPQ 18, Mobil Oil Corporation v. W. R. Grace and Company 180 USPQ 418, In re Slocombe 184

USPQ 740, In re Mercier 185 USPQ 774, Corona Cord Tire Company v. Dovon Chemical Corporation 192 CD 255, See In re Hawkins 174 USPQ 157 (pg. 163) reasoning is sufficient, evidence is not required.

Response to Arguments

4. Applicant argues that the terms, “high-k dielectric material” and “standard-k dielectric material”, are defined on instant specification page 6. However, the terms are only defined with respect to the dielectric constant as opposed to materials or chemical nature of materials and it would required undue experimentations of one ordinary skill in the art to determine suitable combinations of “standard-k dielectric material” and “high-k dielectric material” that will form a composite dielectric layer as recited.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
